

Conventional Range

CONVENTIONAL RANGE

At William Bain Fencing we also manufacture a range of Palisade Gates to match our security fencing providing the perfect solution for our clients who need strong, secure entry and exit facilities.

Double & Single Gates

These gates are made to match our security fencing and your specific design requirements and are manufactured to British Standard Specification.

Bash Barrier

The Lochrin® Bain Bash Barrier has been carefully designed to give the ultimate protection against vehicle damage of boundaries, buildings and structures and is available in various lengths and specifications.

Pedestrian Guard Rail

This guard rail had been designed for use in areas where visibility is of paramount importance. The guard rail is suitable for the use at school entrances, pedestrian crossings or adjacent to busy roads.

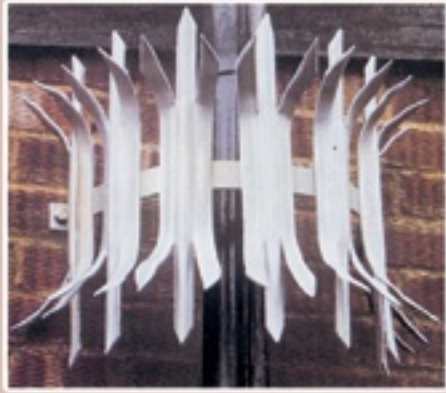

All our Lochrin® products can be supplied either self-coloured, hot dip galvanised to BS 729, or galvanised and polyester powder coated to BS 6497 and in a variety of colours to suit your requirements.

CONVENTIONAL RANGE

Security Crown

The crown is successfully used for securing drainpipe and certain roof areas which are easily accessible and where no other forms of protection or anti-vandal scaling barriers can be fitted. Anti-climb paint can also be applied after erection to provide even greater security. This is an inexpensive form of high security and gives a professional finish to any security project.

Cacti Spikes Anti-Scaling Devices

The Cacti Spikes can be used on walls, roofs and existing fences. Each individual CACTI is manufactured from flame retardant material with a galvanised 12mm diameter bar inserted through tubing for added security and is available in a variety of colours.

Fantail

Varying situations may occur where conventional fencing products are not suitable and where a specialised security item is required.

The Fantail Fence can be designed and manufactured to suit the individual requirements of the installation.

Locking Posts

The Lochrin® Bain Locking Post protects security gates from vehicle ramming when placed directly behind them. The posts may also be used to secure vehicles within a designated area.

Ornate Fencing

The square section ornate fence may be used in areas where appearance as well as boundary detail is of paramount importance. The ornate fence can be manufactured to the customers specific requirements.
